HOW TO USE THE SHEET = Higher PPR+, the more likely it is that the pitcher will pitch well. 115+, expect a quality start. Below 80, expect a poor start.

PPR+ (PITCHER POWER RATING) = Combines pitcher stats and adds factors such as air density, park, umpire and more. Tougher environment, lower PPR+.

PPR / PPR+ = PPR includes many pitcher stats (WHIP, etc). PPR+ includes unique factors like ump trends, air density, park, wind strength/direction, etc.

DNQ = Pitcher doesn't have enough 2016 innings pitched to qualify (15 IP in 2016 required). DNQ + score shows PPR+ despite the lack of the required IP.

BULLPEN RANKINGS = It can be beneficial to consider the bullpens when you are deciding on whether to play the full game or just the first 5 innings.
