**HOW TO USE THE SHEET** = Higher the PPR, the more likely the pitcher will pitch well. 115+, expect a quality start. Below 80, expect a poor start.

**PPR (PITCHER POWER RATING)** = Combines sabermetrics and adds such factors as air density, park, wind, park configuration, umpire trends, etc.

**DNQ** = Pitcher doesn't have enough innings to qualify (15 IP in 2016/17 required). DNQ + number is the PPR using the low innings pitched.

**BULLPEN RANKINGS** = It can be beneficial to consider bullpens when you are deciding on whether to play the full game or just the first 5 innings.
